Biocomposites, especially wood and natural fibre plastic granulates, are being utilised for consumer goods such as music instruments, casings and cases, furniture, tables, toys, combs and trays. The unique look and touch convey high quality and value and are therefore well received by customers. These biocomposites offer a range of possibilities for product differentiation. The biocomposite markets continue to grow: They are stable in established markets like construction and automotive and show strong growth in the more recently developed markets for consumer goods and packaging. This provides ample opportunities for innovative applications from new players.

Biocomposites - Find the real alternative to plastics

Plastics can be replaced by biocomposites with wood or natural fibres

- The “8th Biocomposites Conference Cologne” is the world’s largest conference and exhibition on the topic. More than 300 participants from all over the world and 25 exhibitors are expected to benefit from the rapidly growing interest for plastic alternatives.
- Vote for the “Biocomposite of the Year 2019” at the Biocomposite Award Session. The winner will be announced in the first evening during the gala dinner.
