Subject: Kebony Presentation

Presentation title:

Kebony - a sustainable technology for exterior wood products

Abstract

The Kebony® process is a patented chemical wood modification technology. The technology is based on the in-situ polymerisation of furfuryl alcohol in solid wood. The history of furan polymers for wood modification, the process fundamentals, the properties of Kebony wood products and the main applications will be explained. Furthermore, the presentation will discuss future technical possibilities and market trends influencing the development of Kebony and chemical wood modification.
